PROFILE

I am a recent graduate specializing in health informatics and information management, with a strong passion for personal development. During my internship, I gained valuable experience working with systems in government hospitals, including Arcos Air, Raqam, Oasis, and Medical Cloud Care. I possess a solid foundation in healthcare systems, electronic health records, and data analysis. I am dedicated to leveraging technology and data to enhance healthcare systems and improve patient outcomes, focusing on implementing solutions that boost healthcare efficiency.

My professional interests include enhancing healthcare system efficiency, improving patient experiences through technology, driving innovation in digital health, and exploring AI, genomics, and bioinformatics. I am committed to continuous learning and contributing to transformative solutions that enhance healthcare delivery through technology.

I had the honor of leading my class for four years on the academic accreditation team at the College of Public Health and Health Informatics, resulting in full accreditation. I actively represent the college at conferences, where I present innovative ideas.

Interests: Data Analysis | Digital Health | Healthcare Technology | Interest in AI & Genomics | Research Enthusiast
